

1

2 **Supplemental Figure 1. Expression of housekeeping genes in BEND and THP-1 cells.**

3 Expression of BEND cells *GAPDH* according to treatment (A-D) and expression of THP-1 cells

4 *ACTB* according to treatment (E-H). Expression of housekeepers was stable across treatments

5 for both cell lines ( $P > 0.05$ ). Bars represent the mean  $\pm$  SEM, and dots represent individual

6 replicates. Data are presented as the quantification cycle ( $C_q$ ). \*  $P \leq 0.05$  compared to medium

7 alone controls following Tukey's test.
